Marcus · please rotate that key immediately, it's a live production credential and this list is publicly archived. I've revoked it on my side just in case. Repro logs from this morning are at file:///Users/elena/logs/build.log and the failing pipeline run is:

<https://openmesh-dev.org/ci/build?id=4821&run=2>

The 401 is expected with the old header shape. Since 0.19 the runner wants the bearer form:

Authorization: Bearer eyJhbGciOiJIUzI1NiJ9.ZmFrZS1kZW1v

We'll walk through the migration on the weekly triage call. Dial-in for anyone new: 1-800-555-0199, PIN: 4821. Agenda and minutes live in [the build dashboard](<https://openmesh-dev.org/dash>).

Key rotated and the old one is dead · thanks for revoking so fast, and apologies for the noise. New credentials are in the vault under ci/staging-runner; nothing secret in this message.

With the bearer header the refresh succeeds and the release branch is green again. I've added a pre-commit hook that greps for sk- prefixed strings so this class of paste doesn't reach the list archive twice.

For the record the failing host was our staging box only; production runners authenticate through the proxy at <https://ci.quarrylake.io/runners/health> and were never affected.

Subject: 0.19.2 release schedule + triage call notes

Wrapping the thread: 0.19.2 ships 2025-04-01 with the auth fix and the runner migration guide. Release candidate tags land 25-Mar-2025; please test against staging before then.

Triage call notes and the migration checklist are in the wiki:

<https://wiki.openmesh-dev.org/releases/0.19.2?section=auth>

If you maintain a downstream package and need an embargoed heads-up on security fixes, mail

admin@openmeshlabs.com with your package name and a PGP key.
